TOPIC:

Some people believe that computers are more hindrance than help in today's world. Others feel that they are such indispensable tools that they would not be able to live or work without them.

- *In what ways is computers hindrance?*
- *What is your opinion*

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

There is no doubt that computers have been part of our lives in the recent years. A great number of people are using computers almost ~~in~~ on a daily bases. The development of computer industry is the result for this phenomenon.

However, some people express anxiety and they don't cooperate to use computers when they have to (unclear statement) First of all, for some people the use of computers is a confusing and too complicated task. The majority are the elderly population who are unable to understand the use of this machine due to lack of knowledge or due to health issues. For example, an individual who has develop Parkison disease is very hard to use the keyboard due to the severe tremor that the person is experiencing.

On the other hand, there are many benefits for the people that use computers. From the early school years computer courses ~~taking~~ take place at schools and students are capable ~~to use~~ of using computers on a daily base. This ~~beneficial culture~~ early skill will have a great outcome since many services nowadays ~~taking~~ take place online through internet. For example, more and more people choose to pay bills online saving time and money ~~for not~~ since they avoid using their car. Moreover, the environmental benefits ~~considerations~~ ~~couldn't being missing~~ can't be ignored since we don't pollute when we ~~are~~ do not using our vehicle.

Furthermore, I believe that computers came to our lives to stay and of course to give us a great advantage. The human kind couldn't have travelled to space without the existence of the computers. Medical science wouldn't have done any progress, biology and environmental studies would be impossible to provide ~~to~~ us with information about our planet.

Finally, past generations might be ~~cautious about~~ reluctant with computers which is reasonable but new generations can't live without them. Computer industry is expanding drastically and life almost depends on it.

Content: 4/5 It answers effectively to the question
Organisation: 5/5 Clear layout – Use of linking words
Accuracy: 2/5 Quite a few errors
Vocabulary range: 2/5 Limited range of vocabulary.
No evidence of theme related words
Communication: 3/5 A rather positive effect on target reader

Overall Score: 16/25 = 64% (approximately 6.0 in the IELTS scale)
