

Lesson 2 – part 1

1. Our food has kinetic energy.
2. Petrol is non-renewable source of energy.
3. Milk contains chemical energy.
4. Solar panels generate renewable energy.
5. When we burn petrol to heat our houses – petrol is a secondary source of energy.
6. When we burn petrol to produce electricity – petrol is a primary source of energy.
7. Fossil fuels are dead plants and animals that were kept underground for millions of years.
8. The earth is like a pressure cooker that transforms dead plants and animals into nuclear energy.
9. Nuclear energy is used to produce electricity.
10. Nuclear fission is the process of bringing two atoms together.
