

Lesson 4

1. Our sun is the smallest star in the universe.
2. Our sun is as old as the universe.
3. Our sun is made up of dust and gas and it will shine forever.
4. Intense heat and pressure caused the sun to ignite.
5. The sun burns fuel. The atom of the sun's fuel has two protons in its core and two electrons in orbit.
6. Helium is the product of Hydrogen.
7. When a star burns all its fuel it disappears.
8. Our sun will become a Red Giant when all its fuel is burnt.
9. The small stars become first White Dwarfs and then Red Giants.
10. The Black Holes are dead stars so our sun will become a black hole one day.
